Mable Code Test

Create a simple nodejs service that has ONE GET endpoint which returns an array of objects (name, age, location)

Create a react frontend using material UI that displays a list of people (name, age, location) in a list with the ability to drag and drop the order. This list should be retrieved from the nodejs service and use Material UI elements.

Create a unit test in Jest for the React frontend

Please upload code into a public Github repository.
